

Step 1. Insert the pole into the base.

Step 2. Pull out the graphic from the base and keep one foot on the base to prevent it from pulling up.

Step 3. Insert the top into the top profile. Installation is now completed.

NOTE: Please do not insert pole clip into small top channel, this may cause the clip to break. Insert pole clip under top rail in groove where graphic attaches to the top rail.

If it is a 47" it has two poles and it's easier with two people attaching 1 pole each. You can set it up easily by yourself by putting the pole in the base and tilting the pole into the correct groove of the top rail and then straightening it up. Then do the second pole the same way. Don't let the banner slip out of your hands. If you have a couple of people it will be easier to assemble.
